

# Columbian TecTank Solutions for the API Petroleum Industry

**When performance matters most,  
call Columbian TecTank.**

**Unrivaled experience:** For over 100 years Columbian TecTank has served the international oil industry, providing bolted and factory welded tanks for the storage of crude oil, drilling fluids, mud, wastewater, and distillates.

- Over 100 years of experience
- 150,000 tanks delivered in 125 countries around the world
- Our chief engineers have years of experience in the oil industry and are instrumental in creating industry standards
- Our team of in-house engineers work with you to ensure your tank is designed to yield the best performance for your project
- Project managers are assigned to be your partner from order entry to completion to ensure delivery on your requirements

**Highest quality:** We stand behind our products. Our tanks are completely coated inside and outside with an electrostatically applied powder epoxy under factory controlled conditions. Our proprietary coatings provide excellent corrosion resistance and immersion performance even when storing strong caustics, acids, brines and sour crude. Coatings are factory applied and thermally cured, eliminating the risks and costs associated with field-applied coatings. Exterior coating also provides color-retention aesthetics.

- Our proprietary coatings stand up to the elements and enable the “no leak” policy while offering the strongest corrosion and abrasion resistance in the market
- Tanks are designed to meet API specification 12B, and can also be built to AWWA D103, FM and NFPA-22 requirements

Call (913) 621-3700 today to learn how you  
can have the best value in oil storage tanks.

**COLUMBIAN**  
**TecTank**  
Proven Performance in  
Tank Storage Solutions

- Computer assisted design creates plans for tanks that conform to special conditions such as heavy liquids and environmental variances such as high wind factors, snow or seismic loadings
- Tanks can be configured to specific capacity requirements simply by adding or removing a ring of tank shell staves. This allows for future flexibility in increasing tank capacity if necessary. Available in a wide range of configurations with capacities of 100 BBL to 57,000 BBL
- Tanks can be installed on the ground, erected on elevated platforms or towers, or inside existing buildings
- Columbian TecTank has state-of-the-art fabrication equipment and uses LEAN manufacturing processes
- No welding required in erection process reduces risk of fire
- ISO 9001 certified manufacturing facilities
- Hot-dipped galvanized coating available

**Best value:** We work to create the best tank solution to fit your budget. Our products deliver a lower initial and overall life cycle cost when compared to alternatives. Bolted tanks provide a less expensive alternative because:

- Kit packaging allows for economical shipping and assembly even in the most remote locations
- Many standard components are maintained in inventory which reduces the time for fabrication
- Corrosion resistant coatings allow our API-12B tanks to last longer and require less maintenance
- Factory coating and modular assembly reduce costly construction delays
- Modular design makes tank dismantling, expansion or relocation a viable and economical option

***With expert installation from Columbian TecTank, you can rest assured your tank will stand up to years of maintenance-free service.***

***For the best oil storage tank solution, call (913) 621-3700 today!***
