

# CUTTING EDGE ELEVATED STORAGE

## AQUASTORE® COMPOSITE ELEVATED TANK

- ▶ *No Painting Cycles or Extended Downtimes*
- ▶ *Most Cost Effective Elevated Storage*
- ▶ *Fastest Construction and Lead Times*
- ▶ *Best Service and Support*

**AQUASTORE®**  
Tanks & Domes

[www.aquastore.com](http://www.aquastore.com)

**ELEVATED STORAGE DOESN'T HAVE TO DRAIN YOUR MAINTENANCE BUDGET!**  
For elevated storage, you want the most rapid construction, most advanced coatings, lowest maintenance and most cost effective pricing...look no further than Aquastore.

## BEST COATING

Aquastore® tanks feature exclusive glass-fused-to-steel coatings that protect against exposure to the elements and corrosion. Titanium dioxide in the coating adds durability to the interior water contact surfaces. Our proprietary Edgecoat™ process flame sprays the outer sheet edges with stainless steel alloy to provide the ultimate edge protection.

## FASTEST CONSTRUCTION

Tight completion deadlines that would be impossible with other forms of elevated tank construction become commonplace for the Aquastore® Composite Elevated Tank. Commissioning will often be completed in half the time of conventional composite elevated tank fabrication. Bolted construction can proceed in adverse weather conditions that would make welding or field-painting impossible.

## AQUASTORE® ALUMINUM DOME

An Aquastore® Aluminum Geodesic Dome is available with all Aquastore® composite elevated tanks. Having a tank and dome from the same manufacturer and installed as a turnkey package by your Independent Authorized Aquastore® Dealer is a service unique to Aquastore®.

## THE BEST SERVICE AND SUPPORT

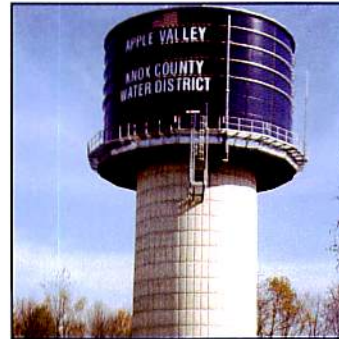

Your Independent, Authorized Aquastore® Dealer has full details on the Aquastore® composite elevated tank. Best of all, your dealer provides turnkey project responsibility from concept to commissioning.

## ECONOMICS AND SECURITY

The cost of an Aquastore® composite elevated tank is typically less than conventional composite construction. However an Aquastore® offers more savings; shorter commissioning time schedules, no repainting (unlike field-painted tanks), and low routine maintenance costs all add up to savings and the best price-to-performance product in the market. With the option of a Cathodic Protection system there is a 10-year extended manufacturer's warranty.

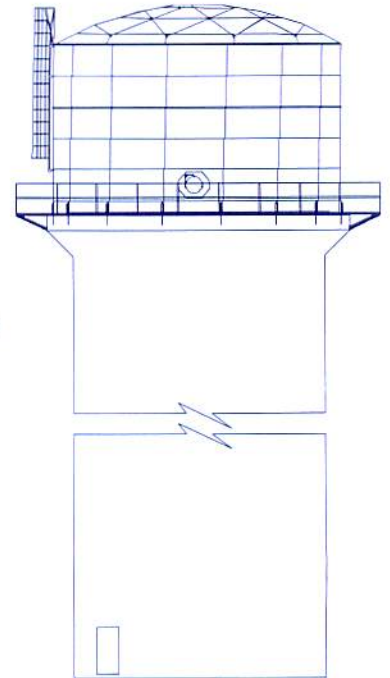

Access ladders, intake piping, overflow, the storage of equipment and even the pumping station can be housed inside the column adding to security and reducing the risk of vandalism. Even the environmental limitations and liabilities of outdoor welding, sandblasting and painting are eliminated with the Aquastore® composite elevated tank.
